

Dynamic Test Kits for R&D  
and Quality Control

## CLOR-N-SOIL

### PCB Screening for soil

Soil analysis is not only expensive, but time consuming.

Clor-N-Soil is a self contained test kit that allows field personnel to perform the test in less than 10 minutes without additional equipment or supplies.

The kit can test any type of soil including sand, topsoil, sediment, and clay at a fraction of the cost of traditional laboratory testing.

All premeasured reagents are sealed in glass ampoules for accurate and consistent results.

PCB concentration, extent and location of site contamination are all critical when determining further action.

Clor-N-Soil PCB field screening kits can help you make those decisions on site in a matter of minutes.

#### Products Specifications

Analytes: PCB as Chloride

Matrix: Soil

Detection Method: Fixed endpoint colorimetric titration

Action Levels: 50 ppm

Analysis Time: 10 minutes

Part Number: CS-OIL
